15	Unable to stop the virus from spreading Personal Hygiene	4	3	12	<p>Transmission</p> <ul style="list-style-type: none"> The virus that causes COVID-19 is mainly transmitted through droplets generated when an infected person coughs or sneezes. This virus can be readily isolated from respiratory secretions. There are two routes by which COVID-19 can be spread: directly from close contact with an infected person (within 2 metres) where respiratory secretions can enter the eyes, mouth, nose or airways - this risk increases the longer someone has close contact with an infected person who has symptoms. Secondly, indirectly by touching a surface, object or the hand of an infected person that has been contaminated with respiratory secretions and then touching one's own mouth, nose, or eyes. <p>Handwashing</p> <ul style="list-style-type: none"> Handwashing is one of the most important ways of controlling the spread of infections, The recommended method is the use of liquid soap, warm water and paper towels. Always wash hands after using the toilet, before eating or handling food, and after handling animals. <p>Coughing and sneezing</p> <ul style="list-style-type: none"> Coughing and sneezing easily spread infections.
